IN THE CLAIMS**1. (canceled)**

2. (currently amended) A hand-held terminal ~~for multimedia~~ capable of making a plurality of kinds of communication, comprising:

a means for negotiating with a server ~~and controlling a multimedia communication apparatus~~ for reserving a part of function of [[said]] a multimedia communication apparatus for a certain kind of communication, the multimedia communication apparatus being equipped in and controlled by the server;

~~a means for conducting multimedia communication with a communication apparatus of a communication partner through a negotiation with the communication apparatus of the communication partner in regard to said function that is reserved with said negotiation; and~~

a means for displaying ~~[[the]]~~ available kinds of the communication for which the hand-held terminal reserved the part of function from the multimedia communication function reserved by said hand-held terminal apparatus.

3. (currently amended) A hand-held terminal ~~for multimedia~~ capable of making a plurality of kinds of communication, comprising:

a means for negotiating with a server ~~and controlling a multimedia communication apparatus~~ for reserving a part of function of [[said]] a multimedia communication apparatus for a certain kind of communication, the multimedia communication apparatus being equipped in and controlled by the server;

Serial No. 09/910,963

Page 3 of 12

a means for ~~conducting multimedia communication with a communication apparatus of~~
~~negotiating with a communication partner through a negotiation with the communication~~
~~apparatus of and conducting the kind of communication with the communication partner through~~
~~the reserved part of function of the multimedia communication apparatus in regard to said~~
~~function that is reserved with said negotiation; and~~

a means for displaying available kinds of the communication ~~a function of the~~
~~communication apparatus of the communication partner, wherein said function is notified from~~
~~through the negotiation with the communication apparatus of the communication partner.~~

4. (original) The hand-held terminal of claim 2, wherein said means for displaying displays a selectable condition, the reserved condition and a using condition of the multimedia communication.

5. (currently amended) The hand-held terminal of claim 2, further comprising:

a unit for storing, ~~to an information storage medium being connectable to the server,~~
information for cryptographic communication to encrypt local communication between the hand-held terminal and the server to an information storage medium.

6. (currently amended) The hand-held terminal of claim 2, further comprising:

a selector for selecting ~~a communication link, depending on the manipulation of a user of~~
~~the hand held terminal or the preset logic, from a plurality~~ the kinds of communication links ~~to~~
~~be used for multimedia communication with the communication apparatus of that can be used~~
with the communication partner and ~~ensuring such communication link for the multimedia~~

~~communication using of which the part of function of the multimedia communication apparatus~~
are reserved.

7. (canceled)

8. (currently amended) A hand-held terminal ~~for conducting a multimedia communication between itself and a partner communication terminal~~ as set forth in claim 3,
further comprising:

a transmitting unit to transmit signals to the partner communication terminal; and
a controlling unit to control said transmitting unit to transmit information with respect to
a class of multimedia communication being available for itself to the partner communication
terminal.

9. (currently amended) A hand-held terminal ~~for conducting a multimedia communication between itself and a partner communication terminal~~ as set forth in claim 3,
further comprising:

a transmitting unit to transmit signals to the partner communication terminal; and
a controlling unit to control said transmitting unit to transmit information with respect to
a class of multimedia communication, at the time of starting the communication, being available
for its own terminal.

10. (currently amended) A hand-held terminal ~~for conducting a multimedia communication between itself and a partner communication terminal~~ as set forth in claim 3,
further comprising:

a transmitting unit to transmit signals to the partner communication terminal; and

a controlling unit to control said transmitting unit to transmit information with respect to a class of multimedia communication, during the communication with the partner communication terminal, being available for its own terminal.

11. (currently amended) A hand-held terminal ~~for conducting a multimedia communication between itself and a partner communication terminal~~ as set forth in claim 3,
further comprising:

a transmitting unit to transmit signals to the partner communication terminal; and

a controlling unit to detect a change of a class of multimedia communication available for its own terminal during a communication with the partner communication terminal and then control said transmitting unit to transmit information with respect to the change of the class of multimedia communication.

12. (currently amended) A hand-held terminal for conducting a multimedia communication between itself and a partner communication terminal, comprising:

a transmitting unit to transmit signals including information with respect to reserving a part of function of a multimedia communication apparatus for a class of multimedia communication services available to itself and to the partner communication terminal,

a receiving unit to receive signals including information with respect to a class of multimedia communication services available to the partner communication terminal from the partner communication terminal,

a display unit, and

a controlling unit to control said display unit to display information of ~~[[a]]~~ the class of multimedia communication services available for use between itself and the partner communication terminal using the information received by said receiving unit.

13. (currently amended) A hand-held terminal for conducting a multimedia communication between itself and a partner communication terminal, comprising:

a communication unit to negotiate with at least one of a multimedia communication apparatus and a server controlling said multimedia communication apparatus for reservation of a part of function of said multimedia communication apparatus during the ~~for a class of~~ multimedia communication available with the partner communication terminal,

a display unit to display available kinds of communication under the available class for which the hand-held terminal reserved the part of function from the multimedia communication apparatus.

a transmitting unit to transmit signals to the partner communication terminal, and

a controlling unit to detect a change of a class of multimedia communication available for own terminal through the negotiation and then control said transmitting unit to transmit signals including information with respect to the change of the class of multimedia communication.

14. (currently amended) As system providing multimedia communication for a hand-held terminal, comprising:

a server for managing a multimedia communication apparatus, and having a negotiation unit for negotiating with said hand-held terminal for reservation of a part of function of the multimedia communication apparatus for a kind of communications with a communication partner, and for reserving the part of function for the hand-held terminal after negotiation, ~~[[and]]~~

a controller in said hand-held terminal for negotiating with said server for reserving ~~[[a]]~~ the part of function of said multimedia communication apparatus, and for conducting multimedia communication with ~~a communication apparatus of a~~ the communication partner through a negotiation with ~~the communication apparatus of the communication partner~~, and

a display in said hand-held terminal for displaying available kinds of communication for which the hand-held terminal reserved the part of function from the multimedia communication apparatus.

15. (currently amended) A mobile terminal for multimedia communication, comprising:

a mobile radio communication unit providing an interface to a mobile radio communication network,

a local radio communication unit for providing an interface to a local area radio communication network, and

a controller unit to control said mobile radio communication unit and to negotiate with ~~[[other]]~~ a communication apparatus for reserving a part of function of the communication apparatus for a kind of multimedia services, and

a display unit to display a status of the kind of multimedia services for which the mobile terminal reserved the part of function from the communication apparatus.

16. (original) The mobile terminal of claim 15, wherein said controller unit, further comprising:

a profile information management unit for managing profile information of said mobile terminal,

a remote controller control unit for controlling peripheral apparatus including said display unit, and

a local communication security unit for providing security features for said local radio communication unit when communicating with said local area radio communication network.
